Annotations to the work programs of disciplines (modules)

Name disciplines	Геология нефти и газа / Petroleum Geology
Summary	study of the formation conditions and patterns of distribution of combustible minerals (coal, oil, gas, peat, oil shale), their composition and properties. The evolution of natural carbonaceous compounds from living matter to combustible minerals, the ways and mechanisms of the transformation of biological systems into geological objects are considered, the main features are determined by which the separation of the original organic matter (OM) occurs to form solid, liquid and gaseous combustibles. fossils, stages of OM transformation. The objectives of the discipline are the formation of knowledge about the basic principles that control the processes oil and gas formation, oil and gas accumulation. The course outlines the conditions for the formation of deposits of solid combustible minerals; patterns of deposits location, basics of prospecting and exploration forecasting deposits of solid combustible minerals.
resultsdevelopment disciplines	Knows the features of the formation of technical documentation and reporting in the field of professional activity, the procedure for filling and deadlines Solves problems taking into account requirements of the current regulatory documentation, having the skills of maintaining technical documentation and reporting Able to draw up standard design, technological and working documents in accordance with the established requirements; submit technical documentation and reporting
Labor intensity,	3
Reporting Forms	Graded (grading)
List of basic and additional literature necessary for mastering the discipline	
Main literature
